Full-Stack & Flutter Developer with 1+ year of hands-on experience building production-grade applications across

Education

fintech, ERP, and logistics domains.

University of Texas at Arlington

2017 – 2023

B.Sc. Computer Science, Minor in Mathematics

Sri Sri University

Aug 2024 – Jun 2026

MCA, CGPA: 9.4 / 10

Experience

Teaching Assistant – University of Texas at Arlington

2020 – 2021

tu

- Assisted 80+ students with programming and debugging in MATLAB-based courses.
- Evaluated 300+ assignments and provided technical guidance.

Projects & Experience

Software Development Intern – Neurolinx Software Technologies Pvt Ltd

Oct 2024 – Present

- Developed multiple full-stack and mobile applications using Flutter, Node.js, MySQL, and SQLite.
- Designed scalable systems, REST APIs, and offline-first architectures for real-world use cases.

Mobile App for Ticket Collection System (Multi-Platform)

Oct 2025 – Present

Flutter, Node.js, MySQL, SQLite

- Architected a distributed ticketing system replacing legacy hardware and offline depot software for bus operations.
- Built mobile application with offline-first design using SQLite, enabling reliable ticketing, GPS logging, and transaction storage without connectivity.
- Built backend services in Node.js for real-time synchronization, ensuring consistency between mobile clients and centralized systems.
- Designed a depot management system with role-based access, multi-user workflows, and cloud-based analytics.

Web Application for Poultry ERP System

Feb 2025 – Present

Flutter, Node.js, MySQL

- Built a production-grade ERP system to digitize inventory, trade, and payment workflows for wholesalers.
- Developed REST APIs for order management, inventory tracking, and payment processing.
- Designed normalized MySQL schemas for transactions, inventory, and customer data.

DCS App – Daily Collection System

Oct 2024 – Dec 2024

Flutter, Node.js, SQLite, MySQL

- Developed offline-capable Android application for microfinance field operations using SQLite with cloud synchronization.
- Automated daily collection tracking, commission calculations, and digital receipt delivery via SMS/WhatsApp.

FinTrack – Financial Management System

Jan 2026 – Apr 2026

React, Node.js, MySQL

- Developed a multi-module full-stack financial management system as part of final semester project, designed for individual users, small businesses, and enterprise workflows.

-
- Designed modular architecture supporting individual, business, and enterprise-level workflows.
 - Implemented expense tracking, budgeting, and reporting features using REST APIs and relational database design.
